Programming Computer Vision with Python: Tools and algorithms for analyzing images By Jan Erik Solem

If you want a basic understanding of computer vision's underlying theory and algorithms, this hands-on introduction is the ideal place to start. You'll learn techniques for object recognition, 3D reconstruction, stereo imaging, augmented reality, and other computer vision applications as you follow clear examples written in Python.

Programming Computer Vision with Python explains computer vision in broad terms that won't bog you down in theory. You get complete code samples with explanations on how to reproduce and build upon each example, along with exercises to help you apply what you've learned. This book is ideal for students, researchers, and enthusiasts with basic programming and standard mathematical skills.

- Learn techniques used in robot navigation, medical image analysis, and other computer vision applications
- Work with image mappings and transforms, such as texture warping and panorama creation
- Compute 3D reconstructions from several images of the same scene
- Organize images based on similarity or content, using clustering methods
- Build efficient image retrieval techniques to search for images based on visual content
- Use algorithms to classify image content and recognize objects
- Access the popular OpenCV library through a Python interface

Editorial Review

About the Author

Jan Erik Solem is a Python enthusiast and a computer vision researcher and entrepreneur. He is an applied mathematician and has worked as associate professor, startup CTO, and now also book author. He sometimes writes about computer vision and Python on his blog www.janeriksolem.net. He has used Python for computer vision in teaching, research and industrial applications for many years. He currently lives in San Francisco.

Users Review

From reader reviews:

Jerry Brock:

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite e-book and reading a reserve. Beside you can solve your short lived problem; you can add your knowledge by the publication entitled Programming Computer Vision with Python: Tools and algorithms for analyzing images. Try to make the book Programming Computer Vision with Python: Tools and algorithms for analyzing images as your buddy. It means that it can to be your friend when you really feel alone and beside associated with course make you smarter than in the past. Yeah, it is very fortunated for you personally. The book makes you more confidence because you can know anything by the book. So , we need to make new experience in addition to knowledge with this book.

Valerie Israel:

What do you think about book? It is just for students because they are still students or this for all people in the world, what best subject for that? Just simply you can be answered for that question above. Every person has distinct personality and hobby per other. Don't to be forced someone or something that they don't want do that. You must know how great in addition to important the book Programming Computer Vision with Python: Tools and algorithms for analyzing images. All type of book is it possible to see on many resources. You can look for the internet solutions or other social media.

John Charlie:

Here thing why this particular Programming Computer Vision with Python: Tools and algorithms for analyzing images are different and reliable to be yours. First of all reading a book is good but it depends in the content of the usb ports which is the content is as delicious as food or not. Programming Computer Vision with Python: Tools and algorithms for analyzing images giving you information deeper and different ways, you can find any reserve out there but there is no reserve that similar with Programming Computer Vision with Python: Tools and algorithms for analyzing images. It gives you thrill looking at journey, its

open up your eyes about the thing that will happen in the world which is perhaps can be happened around you. You can easily bring everywhere like in park, café, or even in your means home by train. If you are having difficulties in bringing the published book maybe the form of Programming Computer Vision with Python: Tools and algorithms for analyzing images in e-book can be your choice.

Erin Kizer:

What is your hobby? Have you heard in which question when you got pupils? We believe that that concern was given by teacher to their students. Many kinds of hobby, Every individual has different hobby. So you know that little person just like reading or as studying become their hobby. You must know that reading is very important as well as book as to be the matter. Book is important thing to increase you knowledge, except your teacher or lecturer. You find good news or update regarding something by book. Amount types of books that can you choose to use be your object. One of them is this Programming Computer Vision with Python: Tools and algorithms for analyzing images.
