## Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers From Wiley

As a guide for pharmaceutical professionals to the issues and practices of drug discovery toxicology, this book integrates and reviews the strategy and application of tools and methods at each step of the drug discovery process.

- Guides researchers as to what drug safety experiments are both practical and useful
- Covers a variety of key topics – safety lead optimization, in vitro-in vivo translation, organ toxicology, ADME, animal models, biomarkers, and –omics tools
- Describes what experiments are possible and useful and offers a view into the future, indicating key areas to watch for new predictive methods
- Features contributions from firsthand industry experience, giving readers insight into the strategy and execution of predictive toxicology practices

## **Editorial Review**

From the Back Cover

Developing novel pharmaceuticals requires nonclinical safety studies on candidate drugs to assess general toxicology (through in vivo experiments), safety pharmacology (effects on major organ systems), and genetic toxicity tests. These data provide risk assessment data that supports progression of candidate drugs from discovery phase through clinical development, to regulatory submission and registration. Traditionally, however, less emphasis was placed on the evaluation of safety issues for projects while still in the drug design phase.

In response to this costly attrition, many pharmaceutical companies invested in “drug discovery toxicology” or “drug discovery safety” to identify hazards and take steps to design out or significantly reduce undesirable safety liabilities earlier; with the ultimate aim of enhancing the probability of success in non-clinical and clinical drug development. Because of this, there is a strong need for personnel involved with toxicology and pharmacology studies need to understand the varied tools and approaches to perform early drug discovery safety analysis.

*Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers* serves as a valuable tool for those discovery scientists. The authors, writing from firsthand industry experience, give readers insight into the strategy and execution of predictive toxicology practices, including what experiments are possible and useful. In addition, they offer a view into the future, indicating key areas to watch for new predictive methods. Broken into different sections, the book deals with the key topics – Safety Lead Optimization Strategies, In Vitro-In Vivo Pharmacokinetics Translation, Predicting Organ Toxicity In Vitro, False Negative Space, --Omics in Predictive Toxicology, Translational Biomarkers, and Signal Investigation Rationale and Practices.

As a guide for pharmaceutical professionals to the issues and practices of drug discovery toxicology, this book integrates and reviews the strategy and application of tools and methods throughout the pre-clinical drug discovery development process.

About the Author

**Yvonne Will, PhD**, is a Senior Director and the Head of Science and Technology Strategy, Drug Safety Research and Development at Pfizer, Connecticut, USA. She co-edited the book *Drug-Induced Mitochondrial Dysfunction*, published by Wiley in 2008.

**Brandon D. Jeffy, PhD**, is a Senior Principal Scientist in the Exploratory Toxicology division of Nonclinical Development at Celgene Pharmaceuticals, California, USA.

## **Users Review**

### **From reader reviews:**

#### **Mildred Ortiz:**

Nowadays reading books are more than want or need but also get a life style. This reading habit give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book that will improve your knowledge and information. The knowledge you get based on what kind of e-book you read, if you want get more knowledge just go with training books but if you want sense happy read one with theme for entertaining for example comic or novel. Often the Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers is kind of reserve which is giving the reader unpredictable experience.

#### **Alma Young:**

Information is provisions for people to get better life, information these days can get by anyone with everywhere. The information can be a understanding or any news even an issue. What people must be consider whenever those information which is inside the former life are challenging be find than now's taking seriously which one would work to believe or which one typically the resource are convinced. If you have the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers as the daily resource information.

#### **Nicolas Olsen:**

Reading a book to be new life style in this year; every people loves to go through a book. When you go through a book you can get a lots of benefit. When you read publications, you can improve your knowledge, because book has a lot of information upon it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your review, you can read education books, but if you act like you want to entertain yourself read a fiction books, such us novel, comics, in addition to soon. The Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers will give you a new experience in looking at a book.

#### **Clarissa Holland:**

That guide can make you to feel relax. This specific book Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers was bright colored and of course has pictures on there. As we know that book Drug Discovery Toxicology: From Target Assessment to Translational Biomarkers has many kinds or type. Start from kids until youngsters. For example Naruto or Detective Conan you can read and believe you are the character on there. Therefore not at all of book tend to be make you bored, any it can make you feel happy, fun and relax. Try to choose the best book for you and try to like reading this.
